#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 34-36, 39, 41, 43-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lyle et al (US 5,571,713) in view of Crocker et al (US 5,782,742).

Lyle et al discloses a pre-loaded kit (column 4 line 61) for delivery of an antisense oligo or peptide (abstract, column 2 line 3, column 2 line 60) with radionuclide (abstract and column 3 line 21) in a balloon catheter (column 2 line 57).

Crocker et al teaches the structure of a balloon catheter. Crocker et al clearly discloses a uniform cross-sectional area along a longitudinal axis, that is, a substantially cylindrical shape, and round holes (see the figures)..

It would have been obvious to one of ordinary skill to utilize a container, e.g., a balloon catheter containing a nucleic acid or peptide and a radionuclide as disclosed by Lyle et al, and having an opening at each end as taught by Crocker et al in order deliver effectively an antisense therapeutic agent.

Claims 34-37, 39, 41, 43-44 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 34 "a nucleic acid sequence" is indefinite; it is a mental construct of a series of nucleic acids rather than a molecule.

No claims allowed.
